

Laboratory Informatics Landscape Assessment

All biotech organizations rely on a laboratory IT ecosystem for efficiency and insight. Are you using yours to the best of its (and your) abilities? Find out with LILA.

Are you wondering:

- We've invested in IT systems as we grow, but how do we optimize these systems for future success?
- Our systems are stable and working, but do we have everything we need?
- Are we spending more time moving, organizing, and collating data than gaining insight from our results?

Our proven LILA process:

Our technology experts will review all your current systems and make recommendations based on years of working with clients in similar growth phases to boost productivity. We focus on optimizations and integrations of the systems you already have, drawing on experience integrating and building systems to bring out the best in the systems you already have and the data you already collect. The end results? Streamlined operations and reduced user stress and strain.

SOFTWARE 

Key Benefits

+ Increase productivity without adding more staff

We'll help you understand how people in your organization use the technology available to them, where the knowledge gaps are, and how to bridge them.

+ Right size your technology

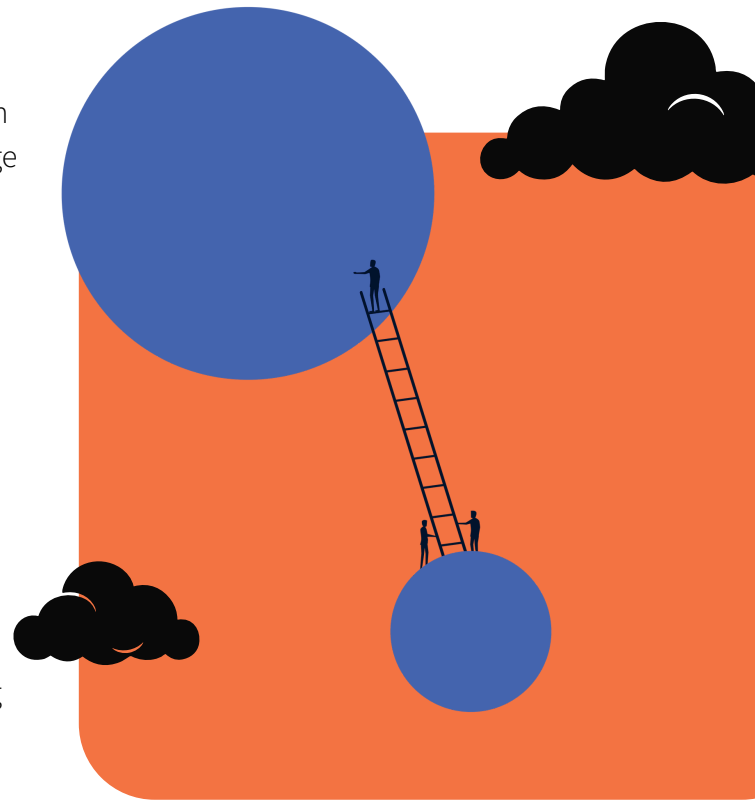

Pinpoint key functionality that is under or over utilized and determine action plans to right size your technology processes for future durability.

+ Reduce manual entry and errors

Identify manual data entry or data transfer that could be covered via integration, reducing time and error rates.

+ Know your benchmarks

Gain insight into how other Biotech and Biomanufacturing organizations like yours are using their systems to gain efficiencies through our Laboratory Landscape.

Our Process

1

Pre-Onsite

Prepare agenda, complete pre-meeting call with project sponsor, gather documentation.

2 WEEKS

2

Onsite

A two-day onsite workshop with sponsor, product manager, and subject matter experts.

2 DAYS

3

Refinement

Follow up conversations and feedback sessions via phone and email.

1-2 WEEKS

4

Delivery

A set of all the deliverables and recommendations.

4-6 WEEKS TOTAL
